Battery Powered Backup System

APC Unit

Basin with two Zoeller Sump Pumps and all PVC connections

Battery Powered Backup System Components:

- Two 1/3 HP Zoeller Sump Pumps
- Two Zoeller Check Valves
- One Solid Lid Basin
- One APC Back-Up Unit
- All Plumbing Materials Necessary for Installation
- 30 feet of discharge line outside of foundation
- Dust Containment

Amazonia Backup System Setup:

When utilizing the Battery Powered Backup System, two Zoeller sump pumps are installed in the same basin. The main pump is installed lower and runs directly from the wall outlet. The backup pump is installed higher and runs from the APC unit. The backup pump will kick in only when the main pump fails causing the water level to reach it. Both pumps carries their individual Zoeller check valves. For a better usage of space, the discharge line is installed in the concrete and runs flush against the foundation wall, our system will not obstruct your plans to finish your basement. Our Backup System is NOT a low voltage backup system, the APC unit generates 120 Volts and 865 Watts of power, capable of providing power to the backup pump for many hours.
